SUMMARY

B.Tech Aerospace Engineering student (Class of 2027) actively transitioning into DevOps & Cloud Engineering. Hands-on experience in containerisation, CI/CD pipeline automation, cloud infrastructure, and Linux/Windows Server administration. Proficient in Docker, Kubernetes, Jenkins, and AWS. Passionate about building reliable, automated systems and eager to contribute to engineering teams.

EDUCATION

B.Tech — Aerospace Engineering · SRM Institute of Science and Technology

2023 – 2027

PROJECTS

Netflix Clone — Full-Stack DevOps Deployment

Docker · Kubernetes · Jenkins · React 18 · Node.js · Nginx

- Containerised a full-stack streaming app using Docker multi-stage builds; orchestrated on Kubernetes (Minikube) with frontend (NodePort) and backend (ClusterIP) services.
- Automated delivery via a 7-stage Jenkins pipeline (Install → Test → Build → Docker Build → Push) with parallel execution and DockerHub registry integration.

Distributed Jenkins Master-Agent Architecture

Jenkins LTS · Docker · GitHub · Pipeline-as-Code

- Designed a Jenkins Controller-Agent topology using Docker-based remote workers; secured with secret-key authentication and label-based job routing.
- Defined the full build workflow as a Jenkinsfile integrated with GitHub SCM for automated trigger-on-push execution.

Event-Driven Data Processing Pipeline

Terraform · GitHub Actions · Infrastructure as Code

- Architected a serverless event-driven data pipeline; provisioned all infrastructure via Terraform for repeatable, version-controlled deployments.
- Implemented CI/CD using GitHub Actions to validate and apply Terraform plans automatically on every merge, eliminating manual release steps.

TECHNICAL SKILLS

DevOps & CI/CD	Docker, Kubernetes, Jenkins, GitHub Actions
Cloud	AWS (EC2, S3, Lambda)
Operating Systems	Linux (Ubuntu), Windows Server 2016 / 2019 / 2022
System Administration	Active Directory, DNS, DHCP, SSH, User & Permission Management
Linux Administration	Shell Navigation, Process Management, File Permissions, Cron Jobs, Service Management
Scripting & VCS	Bash, PowerShell, Git, GitHub

HANDS-ON LAB EXPERIENCE

- Built and managed Linux (Ubuntu) and Windows Server VM environments; configured and maintained OS-level services end-to-end.
- Administered Active Directory, DNS, DHCP, and Group Policy; managed users, file permissions, and SSH remote access.
- Automated tasks with Bash and PowerShell; deployed Docker containers and Kubernetes clusters in local lab environments.

CERTIFICATIONS

AWS Cloud Practitioner Essentials	Amazon Web Services	Dec 2025
Networking	Cisco	Dec 2025
